

# Total Deploy™

Deploy to multiple computers simultaneously, save time!

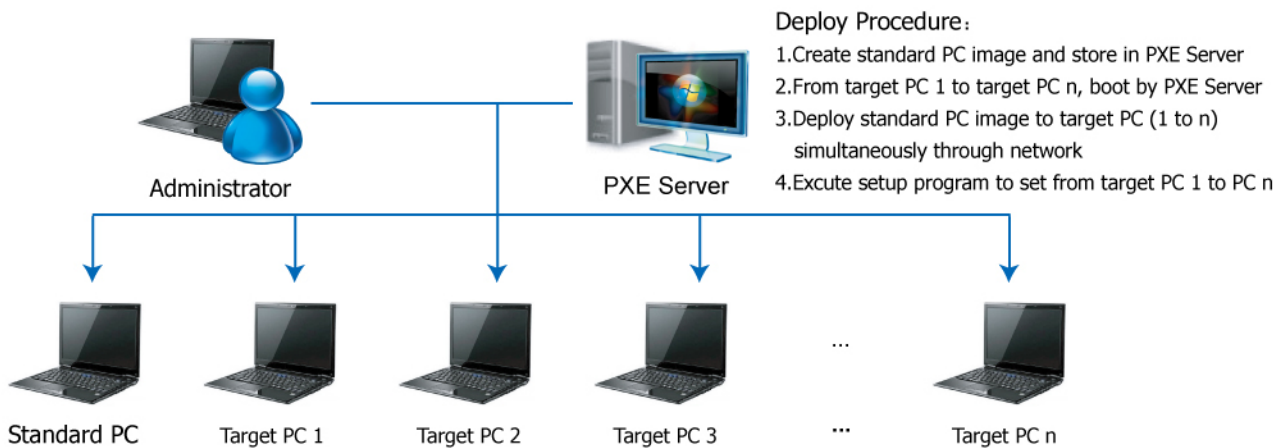

# Total Deploy™

Deploy to multiple computers simultaneously, save time!

FarStone's **Total Deploy™** is a comprehensive deployment solution that enables organizations (businesses, schools, federal/state/local governments, etc.) to deploy new servers quickly and easily. Instead of installing the standard configuration (operating systems, applications, and programs) to multiple computers one by one, **Total Deploy™** saves time by taking a disk image and deploying that image to multiple computers, simultaneously. **Total Deploy™** works to deploy operating systems with hardware-independent imaging, software distribution, and user settings and profiles.

- Deploy complete system or customize deploy content
- Universal restore function, deploy to different hardware
- Advanced script function
- Support Windows Series

## Deploy Process

## Benefits & Features

### Include Backup Software:

Burn this backup tool on CD/DVD, you can backup your computer to an image file.

### Customizable Deployment:

New machines are properly deployed by providing options to specialize the computer names, IP addresses, etc.

### Centralized Management Console:

Provide centralized management of deployments across the network.

### Advanced script function:

Execute pre-defined commands (scripts) after deployment.

### Universal Restore/Dissimilar Restore:

Deploy to original or different computer, or even to a virtual machine, without any hassle.

### Multicasting:

Provides image multicasting to minimize bandwidth usage and speed the deployment of new images.

### 64-Bit Windows Support:

PXE/WinPE/Windows 2003/2008/Windows XP/Vista/Windows 7
