

# RestoreIT® Pro 7

## PRODUCT OVERVIEW

RestoreIT Pro is a powerful Personal Disaster Recovery™ utility that automatically backs up all files on a computer, enabling you to quickly recover individual files or entire computer systems damaged by a virus or hacker attack, a bad software installation, an OS crash, or human error. Since it loads before Windows®, RestoreIT will launch and restore your system even when Windows does not boot.

During installation, RestoreIT Pro saves a **complete image** of your system to a **protected partition** on the hard drive. At the sector level, it then monitors incremental changes to that image. You can set RestoreIT to **back up your entire system at regular intervals** as well—to your hard drive, a network drive, or a USB device.

RestoreIT Pro uses a **real-time, incremental backup technology**, and compresses the stored image, taking up only a small percentage of disk space on most systems. You can easily manage the recovery process by searching or browsing for files or folders in a Windows-like directory and clicking on any restore point to **preview a file in the application associated with it**. Select personal files can be instantly recovered **without affecting other files** on a system.

*RestoreIT Pro 7 lets you fully preview personal files before restoring them to one of hundreds of backup points.*

## FEATURES & BENEFITS

- **Complete Data Protection:** Ongoing backup ensures quick recovery from virus and spyware attacks, system crashes, and human error. Configuring RestoreIT Pro to back up your system to an external device protects against data loss due to hard drive failure
- **File Previewing:** View files in the applications associated with them before choosing your restore points
- **Small Disk Space Requirement:** RestoreIT Pro's proprietary backup technology compresses an image, taking up only a small portion of disk space on most systems
- **File-Level Recovery:** Restore personal files from any one of hundreds of backup points without affecting other files on your system
- **Customizable Scheduler:** Configure RestoreIT Pro to back up your system at intervals of your choosing
- **Flexible Data Backup:** Create incremental backup points, a complete system backup, or a 1:1 copy of your hard drive that includes the hidden RestoreIT Pro partition. Restore your data from a protected partition of your hard drive, a network share, a USB device, or a CD
- **Ghosting Capability:** Easily clone an exact copy of your hard drive to another drive

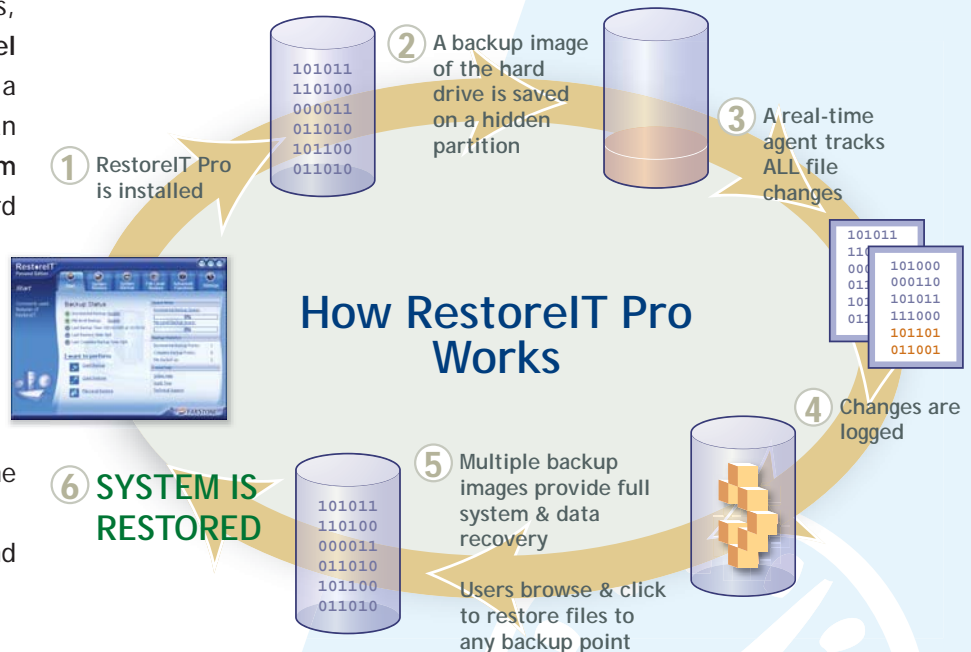

# RestoreIT<sup>®</sup> Pro 7

## TECHNICAL SPECIFICATIONS

RestoreIT Pro resides between the system BIOS of a PC and its operating system. During installation, the software creates a hidden partition where it saves complete (static) and partial (incremental) restore points. Unlike other data backup utilities, RestoreIT Pro enables both **file-level recovery**, allowing you to undo changes to a personal file by returning it to an incremental backup point, and **system recovery**, which restores every file on a hard drive to a selected static backup point.

## SYSTEM REQUIREMENTS

- CPU: Intel Pentium 133 or higher
- RAM: 256MB or more
- Hard Drive: 400MB free space for the program and partition
- Operating Systems: Windows 2000 and XP platforms for desktops and laptops
- RAID Support: RAID 0/1
